ELECTRICAL SPECIFICATIONS				
Voltage		2 V		
	20% DOD	5000 cycles		
Cycle Life	50% DOD	3000 cycles		
	80% DOD	1500 cycles		
Maximum Oper	ating Temperature	-40°C (-40°F) 50°C (122°F)		
Electrolyte		1.275 S.G.		
Call Canacity	20 HR	430 AH		
Cell Capacity	5 HR	350 AH		

 $\mbox{NOTE:}$ Electrical specifications are based on 20 $^{\circ}\mbox{C}\,/$ $68\,^{\circ}\mbox{F}$ temperature.

Long Service Life

- Longer life expectancy; up to 15 years or more in cycling applications.
- Industry leading cycle life, up to 20% greater than flat plate types
- 7 year warranty of which the first 3 years is free replacement). Up to 10 year warranty is available.

Performance and Reliability

- Tubular woven gauntlet for positive elements prevents shedding of active material, exceeding industry standards
- Positive tubular plates allow for superior electrolyte interaction with active material.
- Polyester tubes contain additional acrylic resin along their sides to prevent side short circuits.

Maintenance and Optimization

- Copper terminal connectors, conforming to international accepted standards, isolated with a rubber gasket.
- Virtual elimination of terminal corrosion.
- Terminal studs come with an insulated hexagon head, and an inspection point for voltage measurement as required.
- Optional centralized filling systems.

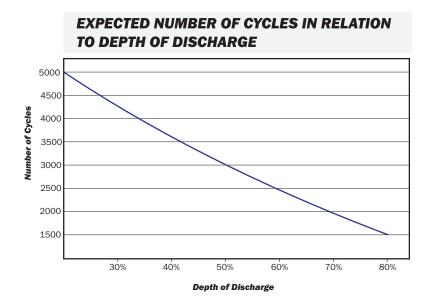

Safety

- Optional, protected cable system with an IP 25 rating, for safety and electrical protection.
- Best possible protection against short circuits of battery terminal area.
- The fully isolated design of the battery terminals, terminal studs and fully isolated copper interconnects ensure no transient current on battery surface.

Certified Quality

 Manufactured in accordance with ISO 14001 and ISO 9001.

CHARGE PROFILE			
Bulk/Absorption	2.45 - 2.50 Vpc		
Float	2.275 Vpc		
Equalize	2.65 Vpc		
Temperature Compensation	-0.003Vpc/°K		

CAPACITY IN RELATION TO THE TEMPERATURE
